

(b) Options at the restore step

direction	in the base map	add-ons
Reuse	load all; Cake; recompute all	approximate recompute
Compress	BF16; INT4; low-rank+INT4	—
Focus	—	progressive / selective restore
Expand	CPU tier; slow tier	prediction: prefetch, eviction order, drop; extra path via neighbour GPU
GPU share (cross-cutting)	stream; MPS (reserve SMs)	borrowed compute

option in the base map
add-on outside the base
add-on that needs prediction (oracle study)
GPU recompute
load (I/O)
